As defined by the Customs Law of 2014, a designated area for storing goods that have undergone customs procedures, awaiting export, re-export, or import into Vietnam is identified as a bonded warehouse. Import and export businesses can reduce costs and improve efficiency by utilizing bonded warehouses.

TBS Group is leading Phase 2 of the warehouse and logistics project in Tan Van, Bien Hoa City, Dong Nai Province. This phase will involve the development of two large warehouse buildings: one measuring 115 meters by 325 meters and the other 115 meters by 250 meters.

Using two sets of the Firelink-100 from Hochiki for each building, the aspirating smoke detector system is designed to provide an extremely high level of sensitivity to smoke detection. Additionally, both warehouses will be protected by Hochiki beam detectors, which are ideal for environments with high ceilings or hard-to-reach areas. Hochiki is honored to contribute to the project, safeguarding the premises and ensuring life safety.
