Protecting Lives: Hochiki Fire Safety at Police General Hospital

With a long history dating back to 1897, Police General Hospital is a leading healthcare institution that serves the Royal Thai Police and the general public. Its mission is to deliver comprehensive, patient-centered healthcare services in a safe and compassionate environment. In addition, Police General Hospital is also a teaching hospital that provides hands-on training and practical experience to medical students and health professionals.

A fire alarm system with high integrity and long-term reliability is essential in protecting lives and safeguarding valuable assets at a hospital. Early warning of fire is crucial as patients may have limited mobility or require assistance and need time to evacuate.

The Police General Hospital is equipped with Hochiki FireNet Latitude Fire Alarm Control Panels and over 1,300 sensors and modules. Leveraging our open protocol, our panels support a range of software enhancements designed to reduce false alarms and improve sensitivity, thereby minimizing the impact of disruptions caused by false alarms.
